

A nighttime photograph of the Tower Bridge in London, illuminated with warm lights. The bridge's two towers and suspension cables are clearly visible against a dark blue sky. In the foreground, a stone walkway with a metal railing runs along the riverbank. A large tree is on the left, and a few people are walking in the distance. The overall scene is a mix of warm bridge lights and cool ambient night colors.

# Practices for Encouraging GRC Software Adoption

## Enhancing your Experience

- 
- What is GRC Software Adoption
  - Practices for Encouraging GRC Software Adoption
  - How to Measure Success of your GRC Program

# What is GRC Software Adoption

*Software adoption can be defined as the process of using or integrating a new software application or system into an organisation*

# Practices for encouraging GRC Software Adoption

**Practice 1** Establish and Drive Business Value

**Practice 2** Establish Business Maturity and Readiness

**Practice 3** Effective Rollout Plans Leveraging Champion

**Practice 4** Make the Adoption Process As Undisruptive as Possible

**Practice 5** Organisation Change Management & Provide Ongoing Support

**Practice 6** Continuous Improvement & value Attainment

# Practice 1: Establish and Drive Business Value

Understand organizational strategic imperatives and priorities as well as expectations of how and when business value will be achieved

What are the main organizational imperatives driving priorities for the program?

What are key use cases for the program mapped to those priorities?

What is the anticipated business value that will be achieved?

How does business value help prioritize business units and use cases?

What are the critical success factors for this rollout?

What resources are needed to get clarity and acceptance on business value and CSFs?

# Practice 2: Establish Business Maturity and Readiness

Rate the Maturity and Readiness of each target business unit or group and sequence based on value to be achieved and ability to get ready

What is the maturity of processes for each use case, for each BU unit with high benefits? How will MetricStream help this BU leapfrog to a higher level?

When you add maturity and readiness factors to the Rollout Planning Matrix, does it shift the sequencing?

What resources are needed to get ready with streamlined processes and what key info is needed for the MetricStream Libraries?

# Practice 3: Effective Rollout plan

For each business unit, and each use case, scope the activities that will be completed by each line of defense

What are the high-level activities that will be completed by each LoD? In what ways are these activities new to what the business unit currently does?

What are the specific activities that will be completed by each LoD within the Business Unit? In what ways do they differ?

What roles in MetricStream that are mapped to these activities? What groups performing similar activities need similar training?

# Practice 4: Make Adoption process Undisruptive: Leveraging Champions

Map out the rollout milestones and activities, from general sessions to testing, specific training and communication involvement from Champions

Who will be the Champions within each business unit and across similar activities (for example: risk assessment, issue management)?

What key milestones need to be met, with what time requirements from the Champions and user communities?

How will you Brand and Build Enthusiasm in the new program and system?

# Practice 5: Organization Change Management & Provide ongoing Support

Understand what roles and job functions will change and how individuals will be impacted, retrained or redeployed

What are the key roles that will change and who within each unit will be affected?  
Will the change be viewed positively, or negatively?

How can HR and the Change Management team prepare for successful organizational and job function changes?

What Is the sentiment of the teams?  
What parts of the rollout are effective or need to be improved?

# Practice 6: Continuous Improvement: Value Attainment

Define the Continuous Improvement process and plan for each rollout group, with executive sponsor and champion involvement

What are adoption rates for the program, new processes and system? What is working and what is not?

What Improvements need to be made? Are there small incremental changes that would bring on more adoption?

What business benefits are being achieved? How are successes being measured?

# How to Measure Success of your GRC Program

## Business Drivers

- Time taken to Identify risks
- The reduction of risk exposure (losses, fines, non compliance)
- Rapid reporting

## Operational Drivers

- The Number of users opted for training
- The percentage of users trained and onboarded
- The percentage of users using the application i.e. Distinct Logins
